I created a baked potato because I believed it would be an easy way to incorporate a lot of shapes in a simple food item. I was unable to generate a true image in chat gpt so I decided to use adobe firefly in order to get a more comparable piece to what I created. I definitely think the AI has me here in what it generated, with a more complex piece in comparison to my almost flat representation. However the AI didn't exactly follow the rules and didn't use only geometric shapes, however I believe that is something one must find in order to accomplish. As far as the AI is concerned, it only has to make it using simple shapes, and doesn't understand the underlying concept of what a simple shape is.
