Bridger Burkes

Homework 3

MART220

2/4/2024

       I originally intended to add some collision and bouncing into the objects within my piece, and I ended up accomplishing that. However, chatgpt went for a more creative approach opting to make all objects created by event handling, and having them all able to collide with each other. In the end, it accomplished more than I did. Seeing as how it wasn't creating an art piece this time, and this project was purely based on an attempt at physics, it has a much easier time creating something relevant to the premise.
